ADOPTION PACK

With 400,000+ homeless dogs in Bali, adoption is the best option if you are looking for a fur-ever friend. Thank you for saving a life and choosing to adopt. The Bali Dogs are one of the most amazing breeds and you will not regret adopting.

ABOUT THE BALI DOG BREED

The Bali Dog is indigenous to Bali. Their DNA can be traced back 12,000 years originating from the Australian Dingo and Asian Wolf.

Temperament: Bali Dogs are intelligent, alert, and friendly, although slightly conservative. It is never overly shy nor aggressive. At home it is an excellent watchdog, sounding a warning bark to announce the arrival of any stranger. It is protective of its home and family, although it does not threaten to bite or attack people. Bali Dogs learn new tasks quickly and are eager to please.

Coat: Short haired for the tropical climate. Sheds yearly.

Colours: Black, White, Brindle, Mix

Size: Medium Size

Lifespan: 10-15 years

NOTE: Bali dogs are very very smart and they love to jump onto high things. Bali Dogs are known to climb fences and scale walls so please ensure you do not have anything against the fence that they could use to jump over the fence, or wire fences they can climb.

ADOPTION PACK

E: love@missionpawsible.org T: 0812 3705 1720 *Because every rescue mission is possible!*

GENERAL HEALTH

The Bali Dog is synonymous only to Bali. As their heritage dog they are built for this climate, therefore they are tough and robust to the elements. However a healthy dog is based on the food, care and well being provided to them

FOOD / DIET

Nutritious food is paramount for a healthy dog both inside and out.

Feed twice a day – morning and night

Suggested diet – keep a balanced diet to ensure a happy hound.

- Steamed Rice mixed with Boiled Chicken Heads / liver / neck / breast
NOTE: Never give your dog cooked bones, always finely cut up before serving. A sharp bone can choke or cause internal damage to your pet.
- Eggs – boiled or raw
- Kibble / Dry Food from the pet shop. We recommend Optima.
- Canned we do not recommend as core diet – it lacks nutrients and equivalent to McDonalds for humans.
- **Always** have fresh clean water available 24 hours 7 days a week

HOME COOKED RECIPE:

INGREDIENTS:

- 2 kg chicken necks or heads
- 1 kg liver
- 1kg carrots or pumpkin or sweet potato
- 2 bunches spinach (any kind) or green beans

METHOD:

- 1) Put meat in rice cooker and add water to cover the contents. Set to COOK. It will take approximately 30mins depending on your rice cooker. The longer you cook the more tender the meat and easier to cut up.
- 2) Once cooked pull the meat out and allow to cool. Do not throw out the juice / chicken stock.
- 3) Mash up the meat so no bones or pointy/sharp pieces appear.
- 4) On stove slightly cook the vegetables (5-10mins), When cooked. Drain and keep the water / vegetable stock.
- 5) When cool put in the blender and use the vegetable stock *Optional based on your dogs liking of vegetables. Some dogs pick out the vegetables so blending it ensures they get the nutrients.*
- 6) Use the chicken stock to cook your rice in the rice cooker.

Once you have prepared the above create portion sizes to suit your dog or dogs for 3 days. ie. A plastic container add ½ vegetable ½ meat. Put in freezer to store.

MISSION PAWS'IBLE: ADOPTION PACK

E: love@missionpawsible.org T: 0812 3705 1720 *Because every rescue mission is possible!*

Prepare rice fresh every few days and blend with your home made meat and vegetables.
Allow 1/3 rice, 2/3 Meat/Vegetable mix . Keep in the fridge.

SUPPLEMENTS

Just like humans dogs benefit a lot from supplements. Please research before administering to your pet to ensure it is recommended.

Fish Oil or Virgin Coconut oil: We recommend putting in your dogs food daily. 1 capsule Fish or a teaspoon of virgin coconut oil. It helps their immune system / skin and fur.

Calcium: For dogs with bone problems, hip dysplasia or arthritis a calcium supplement or bone support is recommended. But please research and talk to your vet

PET FOOD DELIVERED TO YOU:

KIN DOG FOOD

Order online: www.kindogfood.com

FOOD THAT MAY HARM YOUR PET

Items to avoid	Reasons to avoid
Alcoholic beverages	Can cause intoxication, seizures, low blood sugar, arrhythmias, <i>coma</i> , and death.
Avocado	The leaves, seeds, fruit, and bark contain persin, which can cause vomiting and diarrhea.
Bones from fish, poultry, or other meat sources	Can cause obstruction or laceration of the digestive system. However if cut up finely or in a bone crusher is ok .
Cat food	Generally too high in protein and fats.
Chocolate, coffee, tea, and other caffeine	Contain caffeine, theobromine, or theophylline, which can cause vomiting and diarrhea and be toxic to the heart and nervous systems.
Citrus oil extracts	Can cause vomiting.
Fat trimmings	Can cause pancreatitis .
Fish (raw, canned or cooked)	If fed exclusively or in high amounts can result in a thiamine (a B vitamin) deficiency leading to loss of appetite, seizures, and in severe cases, death.
Grapes, raisins and currants	Contain an unknown toxin, which can damage the kidneys. There have been no problems associated with grape seed extract.
Hops	Unknown compound causes panting, increased heart rate, elevated temperature, seizures, and death.
Human vitamin supplements containing iron	Can damage the lining of the digestive system and be toxic to the other organs including the liver and kidneys.
Macadamia nuts	Contain an unknown toxin, which can affect the digestive and nervous systems and muscle.
Milk and other dairy products	Some adult dogs and cats may develop diarrhea if given large amounts of dairy products.
Moldy or spoiled food, garbage	Can contain multiple toxins causing vomiting and diarrhea and can also affect other organs.
Mushrooms	Can contain toxins, which may affect multiple systems in the body, cause shock, and result in death.
Onions and garlic (raw, cooked, or powder)	Contain sulfoxides and disulfides, which can damage red blood cells and cause <i>anemia</i> . Cats are more susceptible than dogs.
Persimmons	Seeds can cause intestinal obstruction and enteritis .
Pits from peaches and plums	Can cause obstruction of the digestive tract.
Raw eggs	Contain an enzyme called avidin, which decreases the absorption of biotin (a B vitamin) . This can lead to skin and hair coat problems as well as neurologic abnormalities. Raw eggs may also contain <i>Salmonella</i> .
Raw meat	May contain bacteria such as <i>Salmonella</i> and <i>E. coli</i> , which can cause vomiting and diarrhea.*
Rhubarb leaves	Contain oxalates, which can affect the digestive, nervous, and urinary systems.
Salt	If eaten in large quantities it may lead to <i>electrolyte</i> imbalances, seizures, and even death.

MISSION PAWS'IBLE: ADOPTION PACK

String	Can become trapped in the digestive system; called a "string foreign body."
Sugary foods	Can lead to obesity , dental problems, and possibly diabetes mellitus .
Table scraps (in large amounts)	Table scraps are not nutritionally balanced. They should never be more than 10% of the diet. Fat should be trimmed from meat; bones should not be fed.
Tobacco	Contains nicotine, which affects the digestive and nervous systems. Can result in rapid heart beat, collapse, coma, and death.
Yeast dough	Can expand and produce gas in the digestive system, causing pain and possible rupture of the stomach or intestines.
Xylitol (artificial sweetener)	Can cause very low blood sugar (hypoglycemia), which can result in vomiting, weakness and collapse. In high doses can cause liver failure and death.

*We suggest that people considering a raw diet for their pet educate themselves thoroughly regarding the safe handling and preparation of raw ingredients, and the proper balance of nutrients required to maintain their pet's health.

RESOURCE: <http://www.peteducation.com/article.cfm?c=2+1659&aid=1030>

SHELTER

All our adopted dogs MUST have a safe, clean, covered area for them to sleep and rest. Never use cages or chains for long periods of time. Only for times you need to keep them separated or safe. Cages or chains ARE NOT a permanent solution for any animals and not accepted if you adopt a pet from us.

FENCING

Please ensure you have a high, secure and safe fence and gates to keep your dog safe and secure. Check your fence line and close any holes larger than 5cm (if you are adopting a puppy). Remove anything against your fence line that a dog could jump onto and over your fence. Bali Dogs are great jumpers and will find a way out if you allow it.

BE AWARE AND VIGILANT

DOG THIEVES

Dog thieves operate in Bali to take dogs for resale, ransom or dog meat. Please be vigilant and never leave your dog unattended or in a vulnerable situation – including in an enclosed yard if you go out during the day. Dog thieving is increasing so please be vigilant. If you are to leave your dog at anytime we recommend putting them in an enclosed room – bathroom or living room so they are totally out of sight of thieves.

DOG POISONING

Always have **ACTIVATED CHARCOAL** in your home (available at the Apothek/Chemist or health food shop). Dog poisoning is becoming common. People are leaving poisoned bait on the streets and beaches to kill strays and throw over fences by disgruntled neighbours. If your dog is showing signs of poisoning take the activated charcoal and put down their throat or mix with water and pour into their mouth. The recommended dose of activated charcoal in small animals is 1 to 5 g/kg of body weight orally.

If your dog is behaving abnormally, or if you have witnessed it ingesting a toxic substance, you should immediately **take your dog to a veterinarian for treatment**, as it may have poisoned itself. If you find the substance that was ingested, bring this to the veterinarian for examination, along with any vomit samples. This will aid in the diagnosis and treatment plan.

Symptoms and Types

Your pet may be experiencing unexplained vomiting, diarrhoea, or may appear to be weak (lethargic) to the point of being unable to move.

HOUSEHOLD PRODUCTS THAT CAN KILL:

Some common types of household products include acids, alkalis, or petroleum-based hydrocarbons such as:

- Drain cleaner
- Oven cleaner
- Toilet cleaner
- Dishwasher granules/tablets
- Laundry soaps/detergents
- Kerosene
- Gasoline
- Paint thinner
- Paint stripper/remover
- Lye
- Furniture polish
- Floor polish
- Shoe polish
- Wood preservative
- Caustic soda
- Chlorine bleach

GENERAL HEALTH CARE

WORMING

Worming is required every 3 months. Please get tablets from your registered Vet or local pet shop.

TICKS

Ticks are everywhere in Bali. They attach the skin and suck blood. If you find your dog has ticks please purchase REVOLUTION from your local pet shop. Choose dosage based on weight. Or try to access Bravecto which is a tablet for treatment for 3 months for ticks, fleas and can help manage mange.

FLEAS

Fleas are common in Bali and can be treated with shampoo and sprays available from your local pet shop.

SKIN CONDITIONS

MANGE

Sometimes dogs in Bali develop skin conditions due to the humid climate. The most common skin condition is mange, a non transmissible mite that irritates the skin and hair falls out. All dogs carry the mange mite so it is important you keep their immune system strong. If their diet is not suitable and their immune system is low mange may occur. Please consult the rescuer or your registered vet to enquire about treatment

CLEANING

We recommend you wash your pet at least once every week to ensure they smell fresh and clean and maintain a good healthy body. Choose a gentle shampoo. Do not get it in your pets eyes.

VACCINATIONS

Bali has many canine diseases that can kill your dog but with vaccinations and yearly boosters you can protect your dog. At adoption you will have received your vaccination booklet **DO NOT LOSE IT**. This is basically your dogs passport of health and documents all its vaccinations and boosters. These are the vaccinations your dog has or needs to have

6 to 7 weeks of age: Administer first combination vaccine (Distemper, Hepatitis, Parvovirus, Parainfluenza, Coronavirus).

4 weeks later: Administer second combination vaccine.

4 weeks later: Administer rabies vaccination

Yearly: Every 12 months you **MUST** organise a booster through your vet.

Check the date of last vaccination in your book

Note: When you get the booster please ensure you witness your registered vet drawing the vaccine from the vile and the sticker from the vile is put into your pets vaccination booklet. It has been reported that some vets have been injecting saline and keeping your money.
